

AHL Partners LLP

Annual Best Execution Disclosure 2020

Disclosure Objective

Pursuant to its regulatory obligations, AHL Partners LLP (“Man AHL”) is required to provide an annual report summarising our analysis and conclusions drawn from monitoring the correlation between order(s) placed with, or transmitted to, a broker for execution and the execution quality received by that broker during the previous calendar year (the, “Review Period”).

Execution Methodology and Research

Man AHL develops and deploys proprietary electronic execution strategies for order handling and routing to third party executing brokers on behalf of its clients. It is noted that the vast majority of orders are handled electronically with little to no intervention by our traders.

Man AHL has a dedicated Execution Research team that evaluates new trading methodologies and opportunities, inclusive of available liquidity sources, brokers and execution venues against those currently utilised to ensure that Man AHL continues to provide its clients with best execution.

As part of its on-going testing and experimentation, the Execution Research team monitors a number of conditions related to market microstructure and execution including but not limited to liquidity, performance of brokers and broker services and fill prices received compared to the forecasted cost of trading.

Man AHL utilises machine learning routing logic, internally called ‘Adaptive Intelligent Routing’, to help us evaluate venue and liquidity choices. This logic is designed to help ensure order flow is allocated to the optimum execution algorithm considering the execution factors specific to that asset class at that time. The deployment of Adaptive Intelligent Routing seeks to allocate eligible flows to brokers and execution algorithms in an automated and data-driven manner, based on performance against an agreed benchmark.

Man AHL continues to monitor the applicability and appropriateness of utilising information made available by one or more consolidated tape providers, as defined under Article 65 of Directive 2014/65/EU, in its on-going monitoring of best execution. Analysis and evaluation of the information provided in RTS 27 reports is on-going.

Broker Selection

When selecting an executing broker Man AHL may consider the following factors:

- accurate and timely execution, settlement, clearance and error/dispute resolution processes;
- reputation, financial strength and stability;
- venue access and block trading capabilities;
- analytics and Execution Research capabilities;
- willingness to execute difficult transactions; and
- willingness and ability to locate and/or commit capital to complete trades.

As a subsidiary of Man Group PLC (“Man”), Man AHL employees are subject to its Global Conflicts of Interest Policy and the requirement to identify and manage conflicts of interest and, where management is not possible, to disclose the conflict to its clients. Such conflicts could include any close links or execution arrangements which may impact Man AHL’s ability to achieve best execution for its client accounts.

From time to time, minor non-monetary benefits may be received in the form of gifts and entertainment by Man AHL employees from brokers and venues. However, all Man AHL employees are subject to the Man Global Gifts and Entertainment Policy that imposes strict reporting, monitoring, limits and pre-approval requirements with regard to any such receipt.

Man AHL does not engage in arrangements for payments for order flow with any broker or other third party entity.

Execution Factors

When executing an order on behalf of a client, Man AHL will take all sufficient steps to execute the order in a manner designed to obtain the best possible results for the client on a consistent basis.

Man AHL will consider the execution factors that they determine to be applicable and appropriate for a specific asset class when handling an order on behalf of one or more client accounts. The ranking of importance and appropriateness of each of the execution factors may differ on an order-by-order basis.

The execution factors include, but are not limited to:

- the execution price including execution cost as applicable;
- speed and/or likelihood of execution;
- speed and/or likelihood of settlement;
- the impact on prices displayed in the market;
- the availability of price improvement (to the extent applicable);
- an instruments' characteristics including liquidity
- counterparty risk; and
- any other considerations as applicable for specific orders e.g. technology and trading systems.

Importance of Execution Factors

Man AHL will take into account the following criteria for determining the relevance and importance of each execution factor:

- client including the regulatory categorisation of the client (though it should be noted that during the Review Period Man AHL did not handle orders on behalf of retail clients, as defined within MiFID);
- current market and liquidity;
- characteristics of the client order; and
- availability and access to liquidity sources.

Where appropriate, precedence will be given to the execution price as the primary execution factor in determining when, with whom and how to execute a client order. However, price may not always be the primary factor. For example, when transparency and liquidity diminish, the importance of other execution factors such as likelihood and timeliness of settlement may increase.

Best Execution Committee

Man AHL has established a Best Execution Committee, comprised of senior investment, trading, compliance and risk employees, which is responsible for ensuring that the activities engaged in by both the traders and the Execution Research team meets the obligations of Man AHL to achieve best execution on behalf of its client accounts.

The Best Execution Committee convenes on a quarterly basis to review a variety of metrics including but not necessarily limited to:

- broker usage;
- broker performance; and
- execution performance.

Decisions made by the Best Execution Committee will inform changes to, among other processes:

- usage of brokers and execution venues;
- the types of measurements performed to analyse broker performance;
- due diligence performed on brokers and execution venues; and
- consideration of new brokers and execution venues.

Summary

Man AHL can confirm that throughout the 2020 calendar year, it considers that it has taken all sufficient steps to meet its obligation to achieve best execution for its clients on a consistent basis.

In particular it considers that:

- It has adopted a comprehensive policy and monitoring framework to support the ongoing requirement to deliver best execution for its clients;
- the execution quality and performance received from brokers is in-line with its expectations;
- It has maintained sufficient relationships with execution venues and brokers to service its trading activities, with appropriate consideration given to contingency; and
- the commission paid to brokers for their execution service was reasonable and in-line, or better, than the standard market rates.

Indirect Execution Report

The following tables indicate for each class of financial instrument, as specified within MiFID II, the top five (5) third-party executing brokers utilised as classified based upon trading volumes whereby order placement occurs rather than executing directly on a trading venue.

Where more than one separate legal entity within the same group structure has been named within the top 5 list, further broker names have been added to provide a more complete picture.

Man AHL has published its indirect execution report based on its execution of financial instruments globally, regardless of the jurisdiction of their listing or execution. We believe that this global view provides a more holistic understanding of the execution venues upon which it relies. However, for the Equities asset class, separate global and European-specific tables have been produced. The global table includes all executions, including in European Issuer ISINs, but does not delineate by liquidity banding. The European table does delineate by liquidity banding as ESMA tick size banding is only applicable to European Issuer ISINs.
